

Hygienic Features That Make Elkay Drinking Water Stations Ideal for Healthy, Happy Communities

Elkay has a wide range of coolers and fountains for indoors and outdoors in a variety of styles and finish. Elkay's Coolers and Fountains have a safe bubbler with Flexi-Guard® technology in a contemporary style and a special antimicrobial agent that spreads around itself.

Touchless, Sensor Activation

Touchless, sensor activation options are available to provide an enhanced hygienic user experience.

Silver-ion Antimicrobial Protection

Silver ion antimicrobial protection on key plastic components to inhibit the growth of mould and mildew.

Mouth Guard

Flexi-Guard bubbler provides a flexible antimicrobial mouth guard to protect against injury and microorganisms

Real Drain System

Real drain system eliminates standing water and prevents the growth of mildew and mould.

WaterMark Certified

Our commitment to safety and quality ensured we transitioned to brass free plumbing in all our water products which allow us to provide assurance to our clients that water coming through our fountains is lead-free and safe to drink. CIVIQ products meet the requirements of ASNZ4020 and WaterMark

Filter

We all know that access to clean, fresh water is fundamental to our health and wellbeing, and filtering our water ensures that this is achieved. Most water filters remove harmful chemicals and bacteria, which if consumed can cause diseases and general ill-health.

Left to Right Water Flow

The water flows to the left and to the right of user contact on our drinking water stations. This is unlike other drinking fountain designs where the water flows upwards and then comes back down into the drain which increases the risk of contaminated water sources.

Foot Operated

Foot operated options are available to provide an enhanced hygienic user experience.
